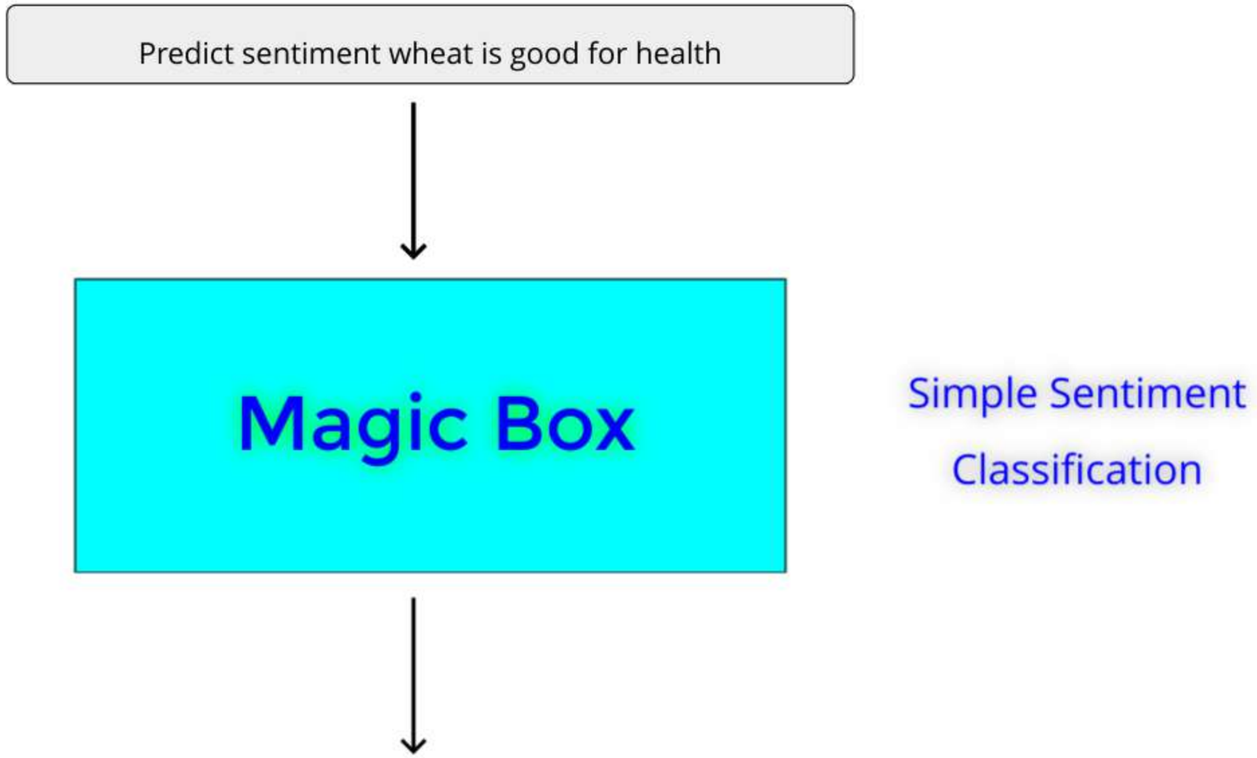
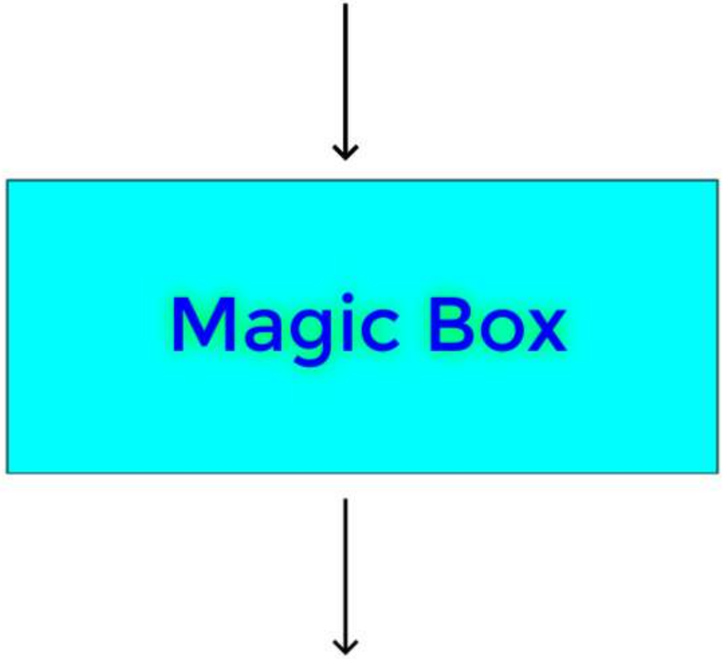
Why did the IIT student bring a ladder to class? Because he heard the exams were going to be

"above average"!



The sentiment for the phrase "wheat is good for health" is positive.

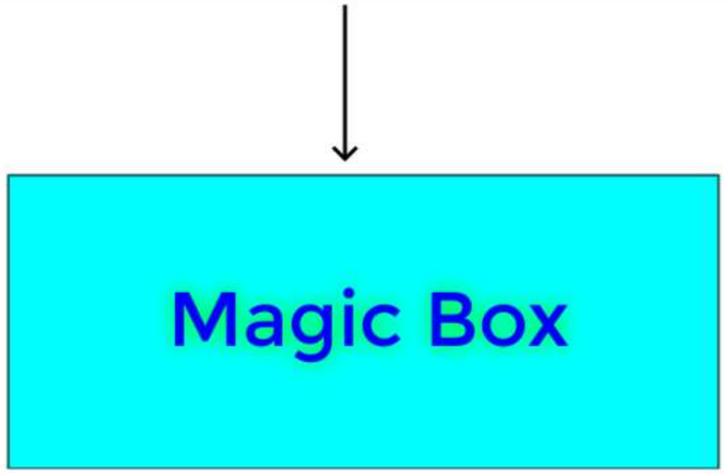
I have 3 pencils and 2 erasers. How many sharpners do I have to sharpen the pencils?



Logical Reasoning

The number of sharpeners you need to sharpen the pencils is not determined by the number of pencils and erasers you have. You would typically need just one sharpener to shave the pencils.

1 pencil costs me 6.5 Rupees and 1 eraser costs me 3.5 Rupees. If I sell the pencil for 8.75 rupees and eraser for 4.25 rupees what profit do I get for 50 pencils and 30 erasers.



Doing Arithmetic

1. Total Cost: 430 Rupees (325 Rupees for 50 pencils + 105 Rupees for 30 erasers).

2. Total Selling Price: 565 Rupees (437.5 Rupees for 50 pencils + 127.5 Rupees for 30 erasers).

3. Profit: 135 Rupees (565 Rupees - 430 Rupees).

Who is inside Magic box ?

Is there any expert sitting inside it?

Is it the reason why we are getting convincing responses?

The magician takes the ordinary something and makes it do something extraordinary

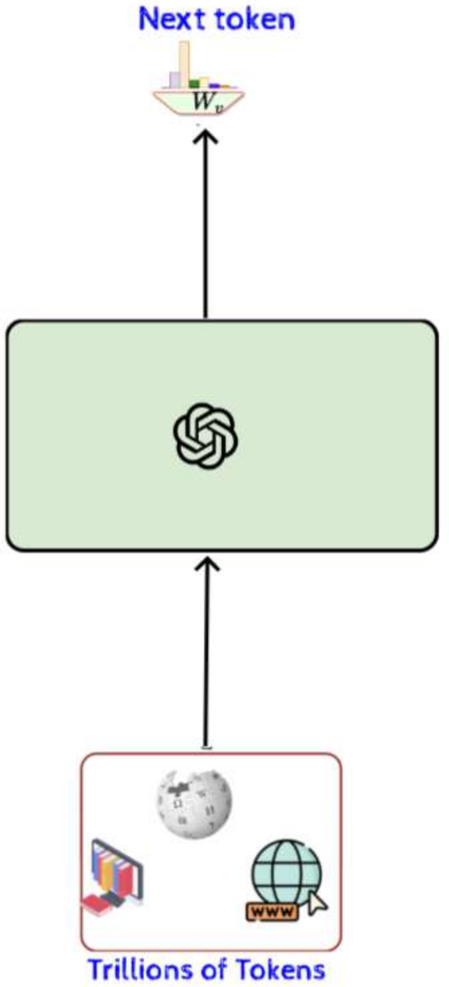
Something ordinary:

To Extraordinary

Predict next token

and next token, next token..

By doing this the model eventually learns language structure, grammar and world knowledge !



Transformers

Imagine you have a sentence in English

that you want to translate into Tamil

I am Reading a book  Naan oru puthagathai padiththu kondirukiren.
